Sample Problem Breakdown: BE10 2

To illustrate how to approach BE10 2, here's a typical scenario:

Problem:

A company issues bonds with a face value of \$100,000, a stated rate of 6%, payable semiannually. The bonds are issued at a premium, and the market rate is 5%. Calculate the bond's issue price, record the journal entry for issuance, and determine interest expense for the first period.

Step 1:

Identify key data:

- Face value: \$100,000
- Coupon rate: 6%
- Market rate: 5%
- Payment frequency: semiannual
- Premium: because coupon > market rate

Step 2:

Calculate present value of bonds:

- Use present value of annuity for interest payments
- Use present value of lump sum for face value

Step 3:

Perform calculations:

- Interest payment = $\$100,000 \times 6\% / 2 = \$3,000$
- Present value of interest = $\$3,000$ annuity factor
- Present value of face value = $\$100,000$ lump sum factor

Step 4:

Record journal entry:

- Debit Cash for issue price
- Credit Bonds Payable for face value
- Record premium as part of bonds payable

Step 5:

Calculate interest expense:

- Use effective interest method:
- Interest expense = carrying amount market rate per period

This example demonstrates the detailed approach needed for solving BE10 2 problems effectively.

Why Is Mastering Chapter 10 Important?

Chapter 10 in most accounting textbooks often deals with long-term liabilities, including:

- Bonds payable
- Notes payable
- Lease obligations

Understanding these concepts is key for students aiming to grasp how companies finance their operations, record debt, and report liabilities on their financial statements.

Step-by-Step Approach to WileyPlus CH 10 BE10 2

- Carefully Read the Problem Statement

Begin by thoroughly reading the problem. Identify:

- The type of liability involved (e.g., bonds, notes, lease)
- The key figures provided (e.g., principal amount, interest rate, market rate, maturity date)
- The specific task: Is it calculating issuance price, interest expense, amortization, or preparing journal entries?

Tip: Highlight or underline critical data and question prompts.

- Understand the Underlying Concepts

Before jumping into calculations, ensure you understand the core concepts:

- Bond issuance at face value vs. at a discount or premium
 - Interest calculations (coupon vs. effective interest)
 - Amortization methods (straight-line vs. effective interest method)
 - Journal entries for bond issuance, interest payments, and amortization
-
- Identify the Required Calculations or Entries

The problem may ask you to:

- Calculate the bond's issue price
- Record journal entries for issuance, interest payments, and amortization
- Determine the bond's carrying amount over time
- Calculate the effective interest expense

List out the specific deliverables to stay organized.

- Gather Necessary Formulas and Data

Depending on the task, you'll need formulas such as:

- Issue price of bonds (using present value of future cash flows)

Issue Price = Present value of future interest payments + Present value of face value

- Interest expense (effective interest method)

Interest Expense = Carrying amount at beginning of period $\times$ market rate

- Amortization of premium or discount

Amortization = Interest expense - Cash interest paid

Gather the relevant data: face value, stated interest rate, market rate, periods, and payment frequency.

Detailed Breakdown of Typical Bond Accounting Problem (Based on CH 10 BE10 2)

Let's simulate a typical problem and walk through the process.

Scenario:

A company issues \$100,000 face value bonds with a stated rate of 6%, payable semiannually. The market rate (effective rate) is 8%. The bonds are issued on January 1.

Objective:

Calculate the issuance price, record the journal entry for issuance, and prepare the first interest payment journal entry, considering amortization.

- Calculate the Present Value of Bonds

Step A: Find the Present Value of the Interest Payments

- Semiannual interest payment = $\$100,000 \times 6\% \div 2 = \$3,000$
- Number of periods = $2 \times \text{number of years (assume 10 years)} = 20 \text{ periods}$

Step B: Find the Present Value of the Principal (Face Value)

- Discount rate per period = $8\% \div 2 = 4\%$
- Present value of face value = $\$100,000 \times \text{PV factor for 20 periods at } 4\%$
- Present value of interest payments = $\$3,000 \times \text{PV annuity factor for 20 periods at } 4\%$
- Use present value tables or financial calculator for PV factors

Example (using approximate factors):

- PV of \$1 for 20 periods at 4% ? 0.4564
- PV of an annuity of \$1 for 20 periods at 4% ? 13.5903

Calculations:

- PV of face value = $\$100,000 \times 0.4564 = \$45,640$
- PV of interest payments = $\$3,000 \times 13.5903 = \$40,770$

Issue Price:

- Total = $\$45,640 + \$40,770 = \$86,410$

This indicates the bonds are issued at a discount because the issue price is less than face value.

- Record the Bond Issuance

Journal Entry:

- Debit Cash for the issue amount (\$86,410)
 - Debit Discount on Bonds Payable for the difference (\$13,590)
 - Credit Bonds Payable for the face amount (\$100,000)
-
- Calculate Interest Expense and Amortization for the First Period

Interest Payment:

- Cash paid = \$3,000

Interest Expense (Effective Interest Method):

- Carrying amount at issuance = \$86,410
- Interest expense = $\$86,410 \times 8\% \div 2 = \$3,456.40$

Amortization of Discount:

- = Interest expense ? Cash interest paid = $\$3,456.40 - \$3,000 = \$456.40$

Adjusting Carrying Amount:

- New carrying amount = previous carrying amount + amortized discount = $\$86,410 + \$456.40 = \$86,866.40$

- Record the Interest Payment and Amortization

Journal Entry:

- Debit Interest Expense for \$3,456.40
- Credit Discount on Bonds Payable for \$456.40
- Credit Cash for \$3,000

Final Thoughts and Tips

- Master the present value calculations, as they form the basis for bond valuation.
- Understand the difference between cash interest paid and interest expense recognized.
- Practice journal entries for issuance, interest payments, and amortization to become fluent.
- Use financial calculators or spreadsheet functions to streamline PV calculations.
- Review key concepts like bond premiums, discounts, and effective vs. straight-line amortization.

Conclusion

The WileyPlus accounting answers CH 10 BE10 2 problem encapsulates critical aspects of long-term liability accounting, particularly bonds payable. By breaking down the problem into manageable steps—reading carefully, understanding what's asked, calculating present values, and recording journal entries—you can confidently approach similar exercises.
