| 12-14 | 2 |

Ideal Answer Approach:

- Constructing the Histogram:
 - Use the class intervals as the bins on the x-axis: 0-2, 3-5, 6-8, 9-11, 12-14
 - Plot the frequency (number of students) on the y-axis
 - Bars should be proportional to frequencies with labels and a descriptive title like "Number of Books Read by Students in a Month"

- Interpreting the Distribution:
- The distribution appears right-skewed, with most students reading 3-5 books
- Fewer students read very few or many books
- The mode is in the 3-5 books category
- Outliers are minimal, but the 12-14 category has the lowest frequency

Answer Summary:

The histogram shows that the majority of students read between 3 and 5 books per month, indicating a central clustering around this range. The skewness suggests that while some students read very few or quite a few books, most tend to read a moderate number.
